

# Homework 9

①  $p(n) = n^3 + C_2 n^2 + C_1 n + C_0$   $p(n) = \ominus n^3$

$$0 \leq \cancel{n^3} \leq n^3 + C_2 n^2 + C_1 n + C_0 \leq \beta n^3 \quad \because n^3$$

$$0 \leq \alpha \leq 1 + C_2/n + C_1/n^2 + C_0/n^3 \leq \beta$$

$$\lim_{n \rightarrow \infty} \frac{C_2}{n} = 0 \quad \lim_{n \rightarrow \infty} \frac{C_1}{n^2} = 0 \quad \lim_{n \rightarrow \infty} \frac{C_0}{n^3} = 0 \quad \lim_{n \rightarrow \infty} 1 = 1$$

$$0 \leq \alpha \leq \lim_{n \rightarrow \infty} 1 + 0 + 0 + 0 = 1$$

$$\boxed{\alpha = \frac{1}{2}} \text{ as } n \text{ get bigger}$$

$$0 \leq 1 + C_2/n + C_1/n^2 + C_0/n^3 \leq \beta$$

$$0 \leq \lim_{n \rightarrow \infty} 1 + 0 + 0 + 0 \leq \beta$$

$$0 \leq 1 \leq \beta$$

$$\boxed{\beta = 2} \text{ as } n \text{ get bigger}$$

→ Another approach for  $\beta$  and  $\alpha$  is

$$\beta = 1 + |C_2| + |C_1| + |C_0| \rightarrow \text{will work for all values positive or negative}$$

$$\alpha = \min \{C_2, C_1, C_0\} \rightarrow \text{if } C_2 < 0, C_1 < 0, C_0 < 0$$

②

$$1) \sum_{n=1}^{\infty} \frac{\sin^2 n}{n^2-7} \leq \sum_{n=1}^{\infty} \frac{1}{n^2-7}$$

$$0 \leq \sin^2 n \leq 1$$

$$\lim_{n \rightarrow \infty} \frac{\frac{1}{n^2-7}}{\frac{1}{n^2}} = \lim_{n \rightarrow \infty} \frac{n^2}{n^2-7} = \lim_{n \rightarrow \infty} \frac{\frac{n^2}{n^2}}{\frac{n^2-7}{n^2}} = \frac{1}{1-0} = 1 \quad 0 < 1 < \infty$$

By limit comparison test  $\sum_{n=1}^{\infty} \frac{1}{n^2}$  is convergent to  $\sum_{n=1}^{\infty} \frac{1}{n^2-7}$ .  
 therefore they both converge. By direct comparison to  
 $\sum_{n=1}^{\infty} \frac{1}{n^2-7}$  it shows that  $\sum_{n=1}^{\infty} \frac{\sin^2 n}{n^2-7}$  also converges.

⑬ ii)  $\sum_{n=1}^{\infty} \frac{1}{\sqrt{n!+2}}$   $\sum_{n=1}^{\infty} \frac{1}{\sqrt{n!}}$  Ratio test

$$\lim_{n \rightarrow \infty} \frac{\frac{1}{\sqrt{(n+1)!+2}}}{\frac{1}{\sqrt{n!}}} = \lim_{n \rightarrow \infty} \frac{\sqrt{n!}}{\sqrt{(n+1)!+2}} = \lim_{n \rightarrow \infty} \sqrt{\frac{n!}{(n+1)!+2}}$$

$$= \lim_{n \rightarrow \infty} \frac{1}{\sqrt{n+1}} = \frac{0}{1+0} = 0 < 1 \rightarrow \text{Converges}$$

By the Ratio test  $\sum_{n=1}^{\infty} \frac{1}{\sqrt{n!}}$  Converges, and by direct comparison  $\sum_{n=1}^{\infty} \frac{1}{\sqrt{n!+2}}$  also converges.

iii)  $\sum_{n=1}^{\infty} \frac{n-2}{n \cdot \sqrt{3n+1}}$

$$\lim_{n \rightarrow \infty} \frac{\frac{n-2}{n \cdot \sqrt{3n+1}}}{\frac{1}{\sqrt{n}}} = \lim_{n \rightarrow \infty} \frac{\sqrt{n}(n-2)}{n \sqrt{3n+1}} = \lim_{n \rightarrow \infty} \frac{(n-2)}{\sqrt{n} \sqrt{3n+1}}$$

$$= \lim_{n \rightarrow \infty} \frac{n-2}{\sqrt{3n^2+n}} = \lim_{n \rightarrow \infty} \frac{\frac{n}{n} - \frac{2}{n}}{\sqrt{\frac{3n^2}{n^2} + \frac{n}{n^2}}} = \frac{1}{\sqrt{3}}$$

$0 < \frac{1}{\sqrt{3}} < \infty$ ,  $\therefore \sum_{n=1}^{\infty} \frac{1}{\sqrt{n}}$  is equiconvergent to  $\sum_{n=1}^{\infty} \frac{n-2}{n \cdot \sqrt{3n+1}}$  and they both diverge.

⑭ i)  $\sum_{n=1}^{\infty} \frac{(-2)^{n^2}}{(n+1)!}$   $\sum_{n=1}^{\infty} \left| \frac{(-2)^{n^2}}{(n+1)!} \right| = \sum_{n=1}^{\infty} \frac{2^{n^2}}{(n+1)!}$

Ratio test

$$\lim_{n \rightarrow \infty} \frac{\frac{2^{(n+1)^2}}{(n+2)!}}{\frac{2^{n^2}}{(n+1)!}} = \lim_{n \rightarrow \infty} \frac{2^{(n+1)^2} \cdot (n+1)!}{2^{n^2} \cdot (n+2)(n+1)!} = \lim_{n \rightarrow \infty} \frac{4^n \cdot 2}{(n+2)}$$

decreasing

$$ii) \sum_{n=1}^{\infty} \frac{(-2)^n}{n^2 + 5^n} \quad \sum_{n=1}^{\infty} \left| \frac{(-2)^n}{n^2 + 5^n} \right| = \sum_{n=1}^{\infty} \frac{2^n}{n^2 + 5^n} < \frac{2}{n^2} < \frac{1}{n^2} \quad \begin{matrix} n^2 + 5^n > n^2 \\ \frac{1}{n^2} > \frac{1}{n^2 + 5^n} \end{matrix}$$

By direct comparison, since  $\sum_{n=1}^{\infty} \frac{1}{n^2}$  converges, so does  $\sum_{n=1}^{\infty} \frac{2^n}{n^2 + 5^n}$ .  
It converges absolutely.

$$iii) \sum_{n=1}^{\infty} \frac{(-3)^n}{3^n \cdot \sqrt{n+2}} \quad \sum_{n=1}^{\infty} \left| \frac{(-3)^n}{3^n \cdot \sqrt{n+2}} \right| = \sum_{n=1}^{\infty} \frac{3^n}{3^n \cdot \sqrt{n+2}} = \sum_{n=1}^{\infty} \frac{1}{\sqrt{n+2}}$$

$$\lim_{n \rightarrow \infty} \frac{1}{\sqrt{n+2}} = \lim_{n \rightarrow \infty} \frac{\sqrt{n}}{\sqrt{n+2}} = \lim_{n \rightarrow \infty} \sqrt{\frac{n}{n+2}} = \lim_{n \rightarrow \infty} \sqrt{\frac{\frac{n}{n}}{\frac{n}{n} + \frac{2}{n}}} = \frac{1}{1} = 1$$

$0 < 1 < \infty$ , therefore  $\sum_{n=1}^{\infty} \frac{1}{\sqrt{n}}$  is equiconvergent to  $\sum_{n=1}^{\infty} \frac{1}{\sqrt{n+2}}$  and also  $\sum_{n=1}^{\infty} \frac{3^n}{3^n \cdot \sqrt{n+2}}$ , they all diverge.

AST  $\sum_{n=1}^{\infty} \frac{1}{\sqrt{n+2}} > 0$ , for all  $n \geq 0$  (positive)

$$\frac{1}{\sqrt{n+3}} - \frac{1}{\sqrt{n+2}} = \frac{\sqrt{n+2} - \sqrt{n+3}}{(\sqrt{n+3})(\sqrt{n+2})} = \frac{-}{+} = -$$

$\underbrace{\sqrt{n+3}}_{>0} \quad \underbrace{\sqrt{n+2}}_{>0}$

$$\sqrt{n+3} > \sqrt{n+2}$$

the  $\sum_{n=1}^{\infty} \frac{1}{\sqrt{n+2}}$  is decreasing.

$$\lim_{n \rightarrow \infty} \frac{1}{\sqrt{n+2}} = \lim_{n \rightarrow \infty} \frac{\frac{1}{\sqrt{n}}}{\sqrt{\frac{n}{n} + \frac{2}{n}}} = \frac{0}{1} = 0$$

Therefore by AST, the series  $\sum_{n=1}^{\infty} \frac{1}{\sqrt{n+2}}$  converges conditionally and by extension so does  $\sum_{n=1}^{\infty} \frac{3^n}{3^n \cdot \sqrt{n+2}}$ .

①

$$\sum_{n=0}^{\infty} \frac{(-1)^n}{(n!)^2}$$

$$\sum_{n=0}^{\infty} \left| \frac{(-1)^n}{(n!)^2} \right|$$

$$= \sum_{n=0}^{\infty} \frac{1}{(n!)^2}$$

Ratio test

$$\lim_{n \rightarrow \infty} \frac{\frac{1}{((n+1)!)^2}}{\frac{1}{(n!)^2}} = \lim_{n \rightarrow \infty} \frac{(n!)^2}{((n+1)!)^2} = \lim_{n \rightarrow \infty} \left( \frac{n!}{(n+1)!} \right)^2 = \lim_{n \rightarrow \infty} \left( \frac{n!}{(n+1)(n!)} \right)^2$$

$$= \lim_{n \rightarrow \infty} \frac{1}{(n+1)^2} = \lim_{n \rightarrow \infty} \frac{1}{n^2 + 2n + 1} = \lim_{n \rightarrow \infty} \frac{\frac{1}{n^2}}{\frac{n^2 + 2n + 1}{n^2}} = \frac{0}{1 + 0 + 0} = \frac{0}{1} = 0$$

$0 < 1 \rightarrow$  ~~diverges~~  $\sum_{n=0}^{\infty} \frac{(-1)^n}{(n!)^2}$  Converges absolutely.

ASE  $\rightarrow 0.01 \left( \frac{1}{100} \right)$

$$(n!)^2$$

$$\sum_{n=0}^3 = 1 - 1 + \frac{1}{4} - \frac{1}{6} = \frac{3-2}{12} = \frac{1}{12} \text{ is of accuracy}$$

$$n=1 \rightarrow (n!)^2 = 1 \leftarrow n=0$$

$$n=2 \rightarrow (n!)^2 = 4$$

$$n=3 \rightarrow (n!)^2 = 36$$

$$n=4 \rightarrow (n!)^2 = 576$$
